

How to install your certificate on your windows key store

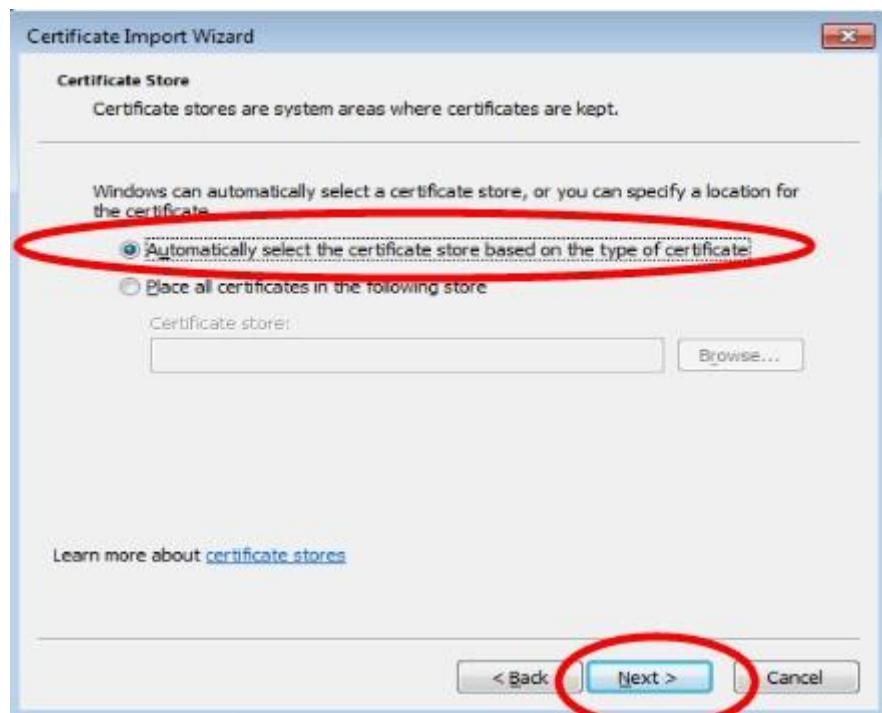

1. Double click your certificate you want to install into windows.
2. On the [Certificate Import Wizard](#) click on [Next](#).

3. Type the password you set when you backed up the PNPKI certificate. Put a check on [Mark this key as exportable](#) and [Include all extended properties](#). The [Enable strong private key protection](#) is optional if you would not mind having to enter your password every time the certificates gets used. After that, click [Next](#).

4. Choose “[Automatically select the certificate store based on the type of certificate](#)” then click [Next](#), then [Finish](#).

5. A notification will appear indicating you have successfully imported your certificate to the windows key store will appear. Click on [OK](#) to close

6. Just follow steps 1-6 if you have more certificates that need to be installed into the windows keystore.
